Education

University At Buffalo - BS in Computer Science — Aug 2023 - Dec 2026

- **Cumulative GPA:** 3.82/4.0
- **Awards:** 2x hackathon winner; Grace Capen Scholar; Dean's List 2023-2026
- R**elevant Coursework**: Software Project Management, Data Models and Query Language (SQL), Algorithms for Modern Compute System, Systems Programming, Computer Architecture, Algorithms and Complexity

Experience

Software Engineering Intern — May 2026 – Jul 2026

Studio23labs — *Toronto, Canada*

- Solo-built and shipped a communications platform using Next.js and Supabase, unifying 4 channels for **50+ SMEs** and handling **30,000+ monthly conversations**.
- Cut manual conversation-assignment time by **40%** through a shared WebSocket inbox and role-based assignment across customer-support workflows.
- Built configurable website chatbots and integrated Retell AI voice calling, with an admin console for managing automated customer interactions.

Software Engineering Intern (Mobile & Data Systems) — Jan 2026 – Present

ESC Lab, University At Buffalo — *Buffalo, New York*

- Built ImpairMate from scratch, a **9-game** React Native/Firebase research app with offline media capture and synchronization on reconnect for cloud ML processing; currently in testing.
- Unified **3 data sources** - REDCap, Empatica, and app records for **40+ participants**, reducing research dataset-preparation time by **50%**.
- Extended **Sense2Quit, available on Google Play**, with Firebase-backed watch-gesture capture, collecting **5,000+ labeled recordings** for its existing model.

Frontend Engineering Intern — Sep 2024 – Aug 2025

DART Collective, University At Buffalo — *Buffalo, New York*

- Engineered and shipped React/Next.js learning interfaces for a digital-literacy platform serving **1,000+ older adults**, translating UI designs into production Tailwind CSS components.
- Automated bulk enrollment with Next.js/PostgreSQL, cutting administration time by **85%** through CSV imports, real-time validation, and rollback.

Projects

Tangent — Website | GitHub

- Shipped a Windows/macOS productivity app with **100+ downloads**, using React, TypeScript and Tauri/Rust to capture notes alongside active-window context.
- Cut median note-capture time by **60%** relative to a separate notes app through Tauri global shortcuts and automatic active-window context capture.
- Built keyboard-driven task triage, natural-language date parsing and Google Calendar OAuth integration to turn captured notes into scheduled follow-ups.

TrailMap — GitHub

- Built a TypeScript codebase scanner that generates source-linked architecture graphs, making service dependencies traceable to their implementation.
- Automated architecture-map updates on code pushes and dependency-impact summaries on pull requests using GitHub webhooks and Supabase graph snapshots.

Skills

Languages: JavaScript, TypeScript, Python, Java, C
Frontend / Mobile: React.js, Next.js, React Native, Tailwind CSS, HTML/CSS, shadcn/ui, Flutter
Backend & Databases: Node.js, Express.js, REST APIs, WebSockets, PostgreSQL, MongoDB, Firebase
Tools & Platforms: Git, GitHub, Vercel, Stripe, Clerk Auth, Inngest, OpenAI API, Anthropic API**,** Docker, Figma
Project Management: Agile practices. Scrum boards
